TablePress

By [Tobias Bätthge](#)

[Download](#)[Details](#)[Reviews](#)[Installation](#)[Support](#)[Development](#)

Description

TablePress allows you to easily create and manage beautiful tables. You can embed the tables into posts, pages, or text widgets with a simple Shortcode. Table data can be edited in a spreadsheet-like interface, so no coding is necessary. Tables can contain any type of data, even formulas that will be evaluated. An additional JavaScript library adds features like sorting, pagination, filtering, and more for site visitors. Tables can be imported and exported from/to Excel, CSV, HTML, and JSON files.

MORE INFORMATION

Please visit the plugin website at <https://tablepress.org/> for more information or a [demo](#).

SUPPORTING FUTURE DEVELOPMENT

If you like TablePress, please rate and review it here in the WordPress Plugin Directory or support it with your [donation](#). Thank you!

TABLEPRESS EXTENSIONS

Additional features and useful enhancements are available as separate plugins, called [TablePress Extensions](#), on the plugin website.

USAGE

After installing the plugin, you can create and manage tables on the “TablePress” screen in the WordPress Dashboard.

Everything should be self-explaining there.

To show one of your tables in a post, on a page, or in a text widget, just embed the Shortcode `[table id=<the-ID> /]` into the post/page/text widget, where <the-ID> is the ID of your table (can be found on the left side of the “All Tables” screen.)

Alternatively, you can also insert tables by clicking the “Table” button in the editor toolbar, and then selecting the desired table.

After that, you might want to change the styling of the table. You can do this by entering CSS commands into the “Custom CSS” textarea on the “Plugin Options” screen. Some examples for common styling changes can be found on the [TablePress FAQ page](#). You may also add certain features (like sorting, pagination, filtering, alternating row colors, row highlighting, print name and/or description, ...) by enabling the corresponding checkboxes on a table’s “Edit” screen.

ACKNOWLEDGEMENTS

Special thanks go to [Allan Jardine](#) for the [DataTables JavaScript library](#).

Thanks to all language file translators!

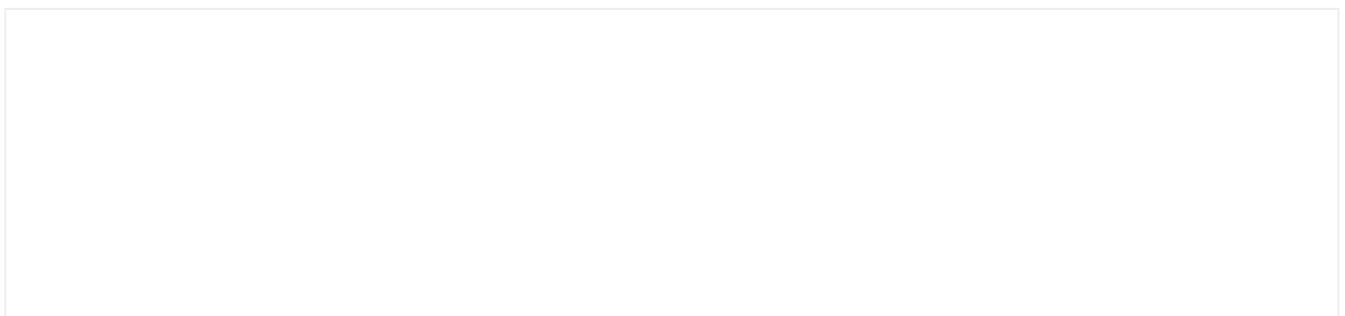

Thanks to every donor, supporter, and bug reporter!
